<u>Abstract</u>

1
2
3   Systems and methods of cataloging substantially all interactions with substantially
4   all versions of a document on a computer network comprising are disclosed. In one
5   embodiment, the system may perform the following steps: determining that the document
6   has entered the network; creating a history for the document, the history comprising
7   references to each copy of the document on the network and each version of the
8   document on the network; and updating the history each time a copy of the document or a
9   version of the document is interacted with.
